Letter of recommendation

We hereby confirm that Pernille Bergesen, born 2000-06-17, has been employed as summer intern at the Control System Software department in OneSubsea Processing AS, from 2024-06-03 to 2024-08-09.

Her tasks in the role as Control and Automation Engineer consisted mainly of working out and specify the control system cyber security philosophy for typical OneSubsea projects and deliveries. This embraces subsea boosting and swivel projects, as well as other related products in the subsea oil and gas business.

These are the documents she has made:

- *Cyber Security Philosophy,* document based on IEC 62443, to outline the cyber security strategy and measures taken in standard OneSubsea control system deliveries.

- *Cyber Security Internal Development Guidelines*, comprehensive instructions and best practices for developing secure control systems to be used internally at OneSubsea.

- *Cyber Security Specifications – Neptun DEEP*, specifications for cyber security measures to be implemented in on-going OneSubsea project delivery, encompassing a control system delivery. Working through extensive requirements on the CS domain from the client, for operator and subcontractors on an offshore vessel for oil and gas production.

Throughout her work on this task, Pernille has been engaged, solution oriented and showing good initiative in the process of learning the control system design and the general domain of cyber security quickly. She has a thorough approach to the task, analysing and providing useful input to what shall become our standardized cyber security philosophy. Pernille is independent and reliable, positive and in general easy to cooperate with.

We give Pernille Bergesen our sincere recommendations and wish her the best of luck in her future endeavours!

With kind regards

Alf Nicolay Ebbing,
Controls Software Department Manager, OneSubsea Processing AS
